[P. 370, B]

7758 of informal apprenticeship under an older doctor. Although there appears to have been no special requirement that a shaman have an assistant, it was not uncommon for a younger man to help out. According to one informant, whom Blind Mike, one of the well-known doctors in historic times, was becoming a doctor, his teacher required him to smoke four hand-rolled cigarettes in a row without allowing the smoke to escape [276] from his lungs. This was not considered an exercise in legerdemain but a way to develop the younger man's control over his power.

Each doctor received instruction from his spirit familiar as to what paraphernalia he should gather but there was a great deal of uniformity in the outfits of [171] Washo doctors. The following description is of the kit of my informant's uncle, who practiced until the first decade of this century, and it includes some items clearly postwhite in origin.

> "I don't know what all doctors had but I'll tell you what my old uncle had 'cause I seen it lots of times. [At this point another Indian entered the house, obviously curious, and my informant stopped talking until the visitor left.] He had eagle feathers and magpie feathers. He had a rattle with six or eight cocoons on a stick wrapped in weasel skin and humming bird feathers. He had a tobacco pouch of tree-squirrel hide. He also had a stone. It looked like a big tooth with a cavity in it. He told me how he got that stone. He was walking to town [Genoa, Nevada] one day and he heard something whistle. He kept on walking but it whistled again. So he went looking for what was making that noise and he found that stone setting by a fence post. I heard that stone whistle sometimes when he was doctoring. He also had a tie made out of beadwork. Lots of times a doctor would pay some woman to make him a real fine basket or some bead work because that's what his power told him to do."

Washo doctors often worked together on "tough" cases. One such was the treatment of what seems to have been an infected elbow by my informant's uncle and Blind Mike. The first step in the process was to blow smoke in a circle around the painful area so that the sickness [755] couldn't move. This was followed by singing, rattling, and sucking until something bright began to come out. It was, according to witnesses, as bright as a star, as bright in fact that even Blind Mike could see it. The bright object proved to be (if we can trust descriptions) the stone and setting of a cheap ring which was removed from the sore arm. It is interesting to note that while this process was successful my informant seemed to consider the cure less than one-hundred-per-cent effective because the woman who was being treated died two years later.

778 Doctors were privy to a number of secrets which
756 were not common knowledge among most Washo. Such a secret was the cave reputed to be inside Cave Rock at Lake Tahoe. This cave was a retreat for shamans [424] who went there to commune with their spirits or to secrete a particularly important piece of paraphernalia. The cave could be entered through a narrow opening on the landward side, but most shamans preferred a more dramatic entrance. By standing on a certain rock and singing a special song they were lowered through the water and then lifted into the cave. The last doc- [787] tor to attempt this was Blind Mike. He was directed to go to the cave in a dream. However, he permitted

463

There were no full time craft specialists in Washo society. Every household produced the major amount of its own food, clothing and shelter. There were some individuals who were better at making bows and arrows and other crafts who specialized to a degree.

Particularly successful hunters became leaders of deer hunting parties. Leadership was somewhat specialized for rabbit drives, antelope drives, mud hen and duck drives, dances, pinenut gathering, and cooperative endeavors generally.

756
463

The shaman came the closest to being a full time specialist since he spent much time at his trade. There was a great proliferation of specialization among shamans.

This specialization involved the source of particular supernatural abilities (wɬqaleyu), what songs or paraphernalia were used, and what curing or other services could be rendered. Some individuals were particularly expert at "charming" antelope in the antelope drives. Others had the ability from the rattlesnake spirit to cure snake bites. In addition, there were herbalists and midwives who practiced without shamanistic ritual.

Descent and Inheritance

Descent is basically bilateral. Because personal property is destroyed at death and houses are torn down and abandoned, they cannot be inherited. Plots of pinenut trees are privately owned and are inherited bilaterally. The plots are marked by lines of stones. If an individual is discovered gathering in the wrong plot, the owner may take the intruder's pinenuts and break the implements he used. A person has the right to pick in his spouse's plot, but this right terminates at the death of the spouse. Barrett (1917) writes that each village has a hereditary chief, teŭbĕ́yĕ (Barrett's transcription), and that the office passes from father to son. Lowie (1939), on the other hand, says that one of his informants reported a teŭbĕ́yĕ for all the Washo; but he comments that this is probably a recent development. His informants did not know whether the chief inherited from his father. Our informants, as well as Lowie's, mention chiefs (teŭbĕ́yĕ) who, in aboriginal times, would call people together on ceremonial occasions and address them, telling them to behave properly. These chiefs had no authority beyond their ceremonial functions; there is no evidence concerning the possible inheritance of the office. Special headmen led the communal rabbit, antelope and deer hunts. According to Barrett (1917), the rabbit chief inherits his office, but Lowie (1939) says he is chosen by the people. Two of our informants, Nancy Emm and Roy James, say the rabbit chief inherited from his father. The antelope chief is a shaman who dreams the right to his office. Shamans do not inherit their positions. Any able hunter is the leader of a communal deer hunt (Barrett, 1917, 9, 12; Lowie, 1939, 303). Inheritance among the modern Washo is bilateral. Family names may be inherited from either the father or mother. Some of the marriages contracted by the younger Washo are of very brief duration, and in this circumstance the child often takes the family name of the mother. The offspring of more permanent unions take the father's name.

Family, Moiety, and Local Group

The nuclear family was the basic unit of aboriginal Washo social organization. The Washo practiced polygyny and therefore had some polygynous families. Whether the polygynous families ever reached a frequency of 20%, a figure that Murdock (1949, 28) uses to distinguish between societies with polygynous families and those with monogamous families, cannot be determined because polygyny is now prohibited by law and the Washo no longer practice it. According to our informants, the aboriginal Washo family was nuclear; none of the published sources contains contrary evidence. The modern Washo family is nuclear, but it sometimes includes a few other relatives.
